```
which is characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VPI, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene

regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the dalivery of transgene to a host. The present sequence is an AAV-1 DNA encoding a cap protein VP1 which is useful in the production of recombinant viral vector for gene delivery Sequence 2211 BP; 577 A; 652 C; 538 G; 444 T; 0 U; 0 Other;	uery Match 100.0%; Score 2209; DB 3; Length 2211; est Local Similarity 100.0%; Pred. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, sarcoidosis, diabetes, scleroderma, psoriasis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel recombinant herpes simplex virus (rHSVS) whose genome is respectively inserted by the Adeno-associated virus (AAV) rep gene and cap gene. The AVV genes may be derived from viruses AAVI, AAV2, AAV3, AAV4, AAV5 and AAV6. The methods of the invention may be useful for generating recombinant vectors with high efficiency and no need of reconfiguration. The current sequence is that of the Adeno-associated virus 2 (AAV2) rep-Adeno-associated virus 1 (AAV1) cap fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CAGGAGCGTCTGCAAGAAGATACGTCTTTTGGGGGCAACCTCGGGCGAGCAGTCTTCCAG

The invention relates to a recombinant herpes simplex virus (HSV)

Characterized in that its genome is inserted with a DNA sequence selected

Characterized in that its genome is inserted with a DNA sequence selected

Characterized in that its genome is inserted with a DNA sequence selected

Erom nucleotide sequences of ADZ46594 or their homologous

CC sequences. Also included are preparing the recombinant HSV, inserved

BNY applying genetic engineering to give the recombinant HSV, inserved

Exale production of S serotype recombinant dehos—associated viruses (AAV)

CC scale production of S serotype recombinant thsV, establishing a one-

series production of S serotype recombinant HSV, establishing a one-

corresponding vector cell-line with the S recombinant HSV, producing

corresponding vector cell-line with the S recombinant HSV in the corresponding vector cell-line, separating and purifying the S serotype recombinant

CC AAV after lysing the AAV-containing cells and culture liquor to give a crude lysate and further purification of rAAV by density-gradient

CC AAV after lysing the AAV-containing cells and culture liquor to give a crude lysate and further purification of rAAV by density-gradient

CC Chamegalovirus, and a polyclonal site and a recombinant vector, pleasmid pSNAV-NX (containing ITR at both enda competer of the cypressing cassette at outer edge of ITR). The DNA sequence of into XDA sequence ADZ46594 can also be inserted into other non-essential caste for use in gene therapy of e.g. cancer, respiratory diseases and neural diseases. The virus vectors are safe, with long expression time and wide-spectrum of cell infection, even non-clawed cells and reverse axonal conduction through the incorporated HSV vectors, and high transfer efficiently. The present sequence is the HSV-ANV and high transfer efficiently. The present sequence is the HSV-ANV and high transfer efficiently. The present sequence is the present sequence of cells and reverse axonal conduction through the present sequence is the present se

                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is an adeno-associated virus serotype 1 (AAV-1) DNA characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 are useful in production of recombinarly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GAGTGGTGGGACTTGAAACCTGGAGCCCCGAAGCCCAAAAGCCAAAAAGCAGGAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2462
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antisheumatic, antiarthritic, neuroprotective, antidabetic, antithyroid, dermatological, and antiinflammatory. The AAV sequence can be used in gene therapy or as part of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple solerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

The invention relates to an expression construct comprising a nucleic acid sequence encoding an adeno-associated virus integration efficiency element (AAV INTES), which is devoid of AAV inverted terminal repeats (AAV ITRS) and site-specifically integrates into a host cell chromosome when provided to the host cell in conjunction with an AAV Rep protein. The expression construct can be used as a therapeutic factor for treating a mammal for a pathologic state which is cancer, including lung cancer, colon cancer, brain cancer, bile duct cancer, bladder cancer, brain cancer, spinal chord cancer, bladder cancer, yastrointestinal cancer, laryngeal cancer, pathologic salibladder cancer, esophageal cancer, prostatic cancer, esophageal cancer, prostatic cancer, estinolastoma, neuroblastoma, ovarian cancer, panceatic cancer, prostatic cancer, thymas cancer or thyroid cancer. Other pathologic state includes inflammatory disease (arthritis), neurodegenerative catering a disease of an organ attributed to the presence of increased or decreased level of a particular gene product(8). This sequence concernesponds to the AAV serotype I complete DNA including the IEE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2282

The present invention describes a polynucleotide (1), comprising parvovirus rep coding sequences and parvovirus cap coding sequences encodes a DNA binding domain from a first parvovirus, and a capsid interacting domain from a parvovirus different parvovirus. Also described: (1) a vector comprising (1); or parvovirus rep coding sequences from the different parvovirus. Also described: (1) a vector comprising (1); or parvovirus rep coding sequences and parvovirus cap coding sequences, where the rep coding sequences are first parvovirus and a capsid interacting coding sequences comprise sequences from the different parvovirus, and the rep coding sequences are stably integrated into the genome of the coding sequences are stably integrated into the genome of the cell; and (3) producing a recombinant hybrid parvovirus particle or adenocasociated virus (rAAV) particle. (1) can be used in producing higher socks of hybrid parvoviruses or parvovirus vectors, which may be used in the delivery of nucleic acides having biological effect to treat or ammiliorate the symptoms associated with any disorder related to gene expression. The polynucleotide may be used to produce a parvovirus vector or ammiliorate the symptoms associated with any disorder related to gene expression. The polynucleotide may be used to produce a parvovirus vector or expression. The polynucleotide may be used to produce a parvovirus vector companion to paramore in a subject, eagl for vaccination. The parvovirus vector may also be used to provide an antisense nucleic may and the methods. The present sequence is used in the exemplification of the manner of the contraction of the manner 
                                                                                                                                          New polynucleotides comprising parvovirus rep coding sequences and parvovirus cap coding sequences, useful in producing higher stocks of hybrid parvovirus vectors for delivering therapeutic nucleic acids to subject.
                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 20; 115pp; English.

```
The present sequence is that of vector pFBDAAV1-VP, which comprises a modified adeno associated virus serotype 1 (AAV1) VP capsid gene. The modified vP gene has the VPI initiation codon mutated to AGG to reduce its translation efficiency. An out-of-frame ATG, which diminishes the translation of VP2 and VP3, is also modified, and the splice acceptor site downstream of the VP1 initiation codon has been destroyed. Recombinant baculovirus vectors comprising the mutant AAV1 VP gene were produced from pFBDAAV1-VP for use in the production of recombinant AAV particles comprising AAV1 capsid proteins in insect (Sf9) cells. The method of producing AAV in insect cells provides an efficient, safe and economical means of producing a large amount of recombinant AAV particles which may be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4741 GACGGCCGGGGTCTGGTGCTTCCTGGCTACAGTACCTCGGACCCTTCAACGGACTCGAC

The invention relates to an adeno-associated virus (AAV) clade comprising at least three AAV members, where each member of the AAV clade is phylogenetically related as determined using a Neighbor-Joining heuristic by a bootstrap value of at least 75 \ \forall per 1000 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, andort treatment of alebetes, scleroderma, psoriasis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                840

The methods and compositions of the present invention are useful for the prevention and/or treatment of neumatoid arthritis, multiple sclerosis, sarcoidosis, diabetes, scloroderma, psortaisis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                            rheumatoid arthritis; multiple sclerosis; sarcoidosis; diabetes; scleroderma; psoriasis; vasculitis; Crohn's disease; hemophilia; HIV; bacterial infection; cancer; ulcerative colitis; antirheumatic; antiarthritic; neuroprotective; antillammatory; antidiabetic; antipporiatic; vasotropic; gastroinestinal-gen.; hemostatic; anti-HIV; virucide; antibacterial; cytostatic; antiulcer; dermatological; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an adeno-associated virus (AAV) clade is at least three AAV members, where each member of the AAV clade is phylogenetically related as determined using a Neighbor-Joining heuristic by a bootstrap value of at least 75 % per 1000 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, sarcoidosis, aclaroderma, psoriasis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAGTGGTGGGACTTGAAACCTGGAGCCCCGAAAGCCCAAAAGCAAAAAGCAGGAC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an adeno-associated virus (AAV) clade comprising at least three AAV members, where each member of the AAV clade is phylogenetically related as determined using a Neighbor-Johning heuristic by a bootstrap value of at least 75 \ per 1000 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of houmatoid arthritis, multiple sclerosis, sarcoidosis, diabetes, allocatema, psoriasis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2141 gácggeceggggrerigergerrecregeracraciaegracereggacerreaacggaeregae 2200
                                                                                                                                                                                                                                                                The invention relates to a novel recombinant herpes simplex virus (rHSVS) whose genome is respectively inserted by the Adeno-associated virus (AAV) rep gene and cap gene. The AVV genes may be derived from viruses AAVI, AAV2, AAV3, AAV4, AAV5 and AAV6. The methods of the invention may be useful for generating recombinant vectors with high efficiency and no associated virus 2 (AAV2) rep-Adeno-associated virus 1 (AAV2) rep-Adeno-associated virus 1 (AAV1) cap fusion DNA (SEQ ID 5) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2261 CAGCAGCTCAAAGCGGGTGACAATCCGTACCTGCGGTATAACCACGCCGACGCCAATT

Geguence 1, Application US/09807802A
; Patent No. 6759237
; GENERAL INFORMATION:
APPLICANT: Wilson, James M.
; APPLICANT: Xiao, Weidong
; TITLE OF INVENTION: Adeno-Associated Virus Serotype I Nucleic Acid Sequences,
TITLE OF INVENTION: Vectors and Host Cells Containing Same
; TITLE OF INVENTION: Vectors and Host Cells Containing Same
; TITLE OF INVENTION: Vectors and Host Cells Containing Same
; TITLE OF INVENTION: Vectors and Host Cells Containing Same
; TITLE OF INVENTION: Vectors and Host Cells Containing Same
; FILE REFERENCE: 2002-02-21
; PRIOR PPLICATION NUMBER: US 60/107,114
; PRIOR FILING DATE: 1998-11-05
; PRIOR FILING DATE: 1999-11-02
; NUMBER OF SEQ ID NOS: 20
; NUMBER OF SEQ ID NOS: 20
; NUMBER PATENTALE: PATENTIN Version 3.1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 7, M.
